

## Beginner Level

### 1. Lambda Basics

- Write a lambda function to add two numbers.
- Write a lambda function to check if a number is even or odd.

### 2. Using map()

- Given a list of integers, use map() to create a new list with each number squared.
- Convert a list of strings to uppercase using map().

### 3. Using filter()

- Given a list of numbers, filter out only even numbers.
- Filter words that have length greater than 5 from a list of strings.

### 4. Using reduce()

- Find the sum of all elements in a list using reduce().
  - Find the product of all numbers in a list.
- 

## Intermediate Level

### 5. Combination of lambda + map

- Given a list of numbers, return a list where each number is multiplied by 10.

### 6. Combination of lambda + filter

- From a list of numbers, filter out all numbers divisible by 3.

### 7. Using reduce() for maximum

- Find the maximum number in a list using reduce().

### 8. String Manipulation

- Given a list of names, use map() to return names with their first letter capitalized.

### 9. Filter Palindromes

- Given a list of strings, filter out only palindrome words using filter().
